heating

Benefit straight away -
save up to 35%
of lost heat

Enjoy a cosy home
and average savings of
up to £275 a year*

Straightforward, safe
and clean to install

Guaranteed results
from approved
professional installers

High performance,
high quality materials

**InstaGroup**

Easy and effective to save energy

Cavity wall insulation is for homes constructed with two external brick or block walls. The small gap, or cavity, between the walls is filled with specialised insulation material, which immediately helps keep in the heat.

When installed professionally, walls radiate warmth back into the inside rooms, draughts are reduced around door and window frames and condensation is eliminated.

You can start **saving up to one third** of your heating – so you can turn down the thermostat and still keep warm, while cutting your energy bills too.

Trust the experts in warmer homes

InstaGroup has over 30 years' experience in developing and manufacturing high quality insulation products. We've successfully insulated over 1 million homes and public buildings through our professional installation group the Snug Network.

- Expert solutions tailored to your home's needs
- Accredited, specialist technicians from the Snug Network
- Minimal disruption - most of the installation takes place from the outside
- The expert installer drills a series of small holes through the mortar of the external brickwork to reach the cavity inside
- Specified insulation material, **InstaFibre** or **InstaBead**, is blown into the wall cavity through the holes, using a blowing machine
- Once the correct density of insulation is achieved the holes are carefully sealed and your home is left clean and tidy
- Our insulation products are non-toxic and good for the environment

“

The Cavity Wall installers were very confident in their job and nothing was too much trouble for them. We cannot express our appreciation for the service and quality of work that we have received.

Mrs Waldren, Camberley
