InstaGroup services

- Solar grant application to Haringey Council Carbon Community Fund
- Material supply
- Technical design and build
- Project co-ordination and system commission
- Solar app for remote monitoring
- MCS and RECC accredited installation

“The savings we generate from solar power will be re-invested into the thriving Ten87 music community and the wider Haringey area. This includes offering free studio time through partnerships with local youth and arts organisations.”

Rob Burns
Founder, Ten87 Studios

End-to-end solar project for a high energy business

InstaGroup completed the installation of an extensive solar PV system for Ten87 Studios in Tottenham, London. Ten87 operates 50 world-class recording studios in London and is home to over 150 recording artists. It's also a thriving creative hub for the local music-making community.

Electricity use was high, with recording gear, sound engineering consoles, audio decks, musical instruments, lights, microphones and more running almost constantly. With the uncertainty of rising energy prices, the business founders knew they had to control day-to-day running costs.

We help access funding for solar

InstaGroup helped the business to apply for community funding, and the cost of the extensive solar installation was covered by a generous grant from Haringey Council's Carbon Community Fund.

A total solution for the switch to solar

InstaGroup adapted the system design to meet additional local council planning regulations and worked efficiently alongside neighbouring businesses. We also overcame issues with access at the site.

Ten87 Studios is looking to invest in battery storage in the near future to further increase savings on energy.

All-round results from the solar experts

The new solar installation is doing more than reduce energy costs for Ten87 Studios. It's also helping the business to reduce its reliance on fossil fuels in support of the long-term business aim of becoming carbon-neutral.

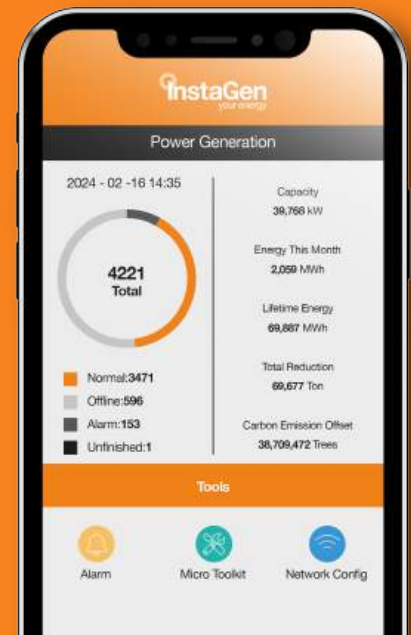

Above all, the cut in carbon emissions for the local community is a positive step towards tackling climate change.

InstaGen software makes it easy to see the savings

With its simple interface and clear, visual data, **InstaGen's** easy-to-use software is what every homeowner is looking for.

One tap on the mobile app or desktop browser is all it takes to see how the system is performing. Users can access as much (or as little) data as they want; track monthly energy production, see how much electricity has been generated since installation, and view the reduction of their home's carbon emissions.

24/7 real-time monitoring helps households to manage and optimise their energy savings, while the pro-active software will alert in the unlikely event there is an issue with any component.

Supported by product guarantees

InstaGen is a British quality-controlled solar and energy storage brand you and your customers can trust.

InstaGen batteries and inverters are covered by a 10 year guarantee. Solar panels have a 30 year minimum performance guarantee.

InstaGen represents the latest in solar technology in one complete package, backed by the technical support and reassurance of the **InstaGroup** guarantee.
